

Product Accessibility Assessment

Name of Product: Canon DR-5010C

Date: May 27, 2005

Note: This document was prepared based on normal walk-up functionality. It does not include maintenance and troubleshooting procedures. **The information contained in this document is proprietary information and is not for reproduction, publication or manipulation in any way or form.** This template addresses a multitude of DR-5010C features; however, any specific inquiries should be made to the Canon Government Marketing Representative.

The rules below refer to the Electronic and Information Technology Accessibility Standards (covered by Section 508 of the Rehabilitation Acts of 1998) issued by the Architectural and Transportation Compliance Board.

| Summary Table Voluntary Product Accessibility Template | | |
|---|--------------------------------|---------------------------------|
| <i>Criteria</i> | Supporting Features | Remarks and explanations |
| Section 1194.21 Software Applications and Operating Systems | Supports with minor exception* | |
| Section 1194.22 Web-based internet information and applications | Not applicable | |
| Section 1194.23 Telecommunications Products | Not applicable | |
| Section 1194.24 Video and Multi-media Products | Not applicable | |
| Section 1194.25 Self-Contained, Closed Products | Supports * | |
| Section 1194.26 Desktop and Portable Computers | Not applicable | |
| Section 1194.31 Functional Performance Criteria | Supports * | |
| Section 1194.41 Information, documentation and Support | Supports * | |

*Please refer to the following pages for detailed information on supporting features and exceptions.

**Section 1194.21 Software Applications and Operating Systems - Detail
Voluntary Product Accessibility Template**

| Criteria | Supporting Features | Remarks and explanations |
|--|----------------------------|--|
| (a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually. | Supports | |
| (b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer. | Supports | |
| (c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes. | Supports | |
| (d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text. | Supports w/ exception | The Brightness and Contrast control in the driver setting are conveyed by image only. Assistive Technology cannot read the tool bar icons of the utility software. However, all the equivalent operations can be executed from the pull down menu, which is supported by Assistive Technology. |
| (e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning | Supports | |

| | | |
|--|----------------------|---|
| assigned to those images shall be consistent throughout an application's performance. | | |
| (f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes. | Supports w/exception | The Brightness and Contrast control in the driver setting are conveyed by image only. |
| (g) Applications shall not override user selected contrast and color selections and other individual display attributes. | Supports | |
| (h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user. | Not applicable | The driver/utility software does not utilize animation. |
| (i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element. | Not applicable | The driver/utility software does not utilize color coding. |
| (j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided. | Not applicable | The product does not permit the user to adjust the color and contrast setting. |
| (k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz. | Not applicable | The driver/utility software does not use an element having a flash or blink frequency greater than 2Hz and lower than 55Hz. |
| (l) When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues. | Supports | |

**Section 1194.25 Self-Contained, Closed Products - Detail
Voluntary Product Accessibility Template**

| Criteria | Supporting Features | Remarks and explanations |
|---|--|--|
| (a) Self contained products shall be usable by people with disabilities without requiring an end-user to attach Assistive Technology to the product. Personal headsets for private listening are not Assistive Technology. | Supports when combined with Compatible AT. | Assistive Technology may be required for users with visual impairments; however, in such cases it is assumed that AT will already be running on the user's PC. |
| (b) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required. | Not applicable | |
| (c) Where a product utilizes touchscreens or contact-sensitive controls, an input method shall be provided that complies with Section 1194.23 (k) (1) through (4). | Not applicable | |
| (k)(1) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be tactilely discernible without activating the controls or keys. | Supports | All hand keys are tactilely discernible. The Start and Stop keys are tactilely discernible by their unique shapes and sizes.. |
| (k)(2) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be operable with one hand and shall not require tight grasping, pinching, twisting of the wrist. The force required to activate controls and keys shall be 5 lbs. (22.2N) maximum. | Supports | |
| (k)(3) Products which have mechanically operated controls or keys shall comply with the following: If key repeat is supported, the delay before repeat shall be adjustable to at least 2 seconds. Key repeat rate shall be adjustable to 2 seconds per character. | Not applicable | There is no key repeat supported. |
| (k)(4) Products which have mechanically operated controls or keys shall comply with the following: The status of all locking or toggle controls or keys shall be visually discernible, and discernible either through touch or sound. | Supports | |
| (d) When biometric forms of user identification or control are used, an alternative form of identification or | Not applicable | |

| | | |
|--|----------------|--|
| activation, which does not require the user to possess particular biological characteristics, shall also be provided. | | |
| (e) When products provide auditory output, the audio signal shall be provided at a standard signal level through an industry standard connector that will allow for private listening. The product must provide the ability to interrupt, pause, and restart the audio at anytime. | Not applicable | There is no function to deliver voice output. |
| (f) When products deliver voice output in a public area, incremental volume control shall be provided with output amplification up to a level of at least 65 dB. Where the ambient noise level of the environment is above 45 dB, a volume gain of at least 20 dB above the ambient level shall be user selectable. A function shall be provided to automatically reset the volume to the default level after every use. | Not applicable | There is no function to deliver voice output. |
| (g) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element. | Supports | Start/Stop keys are distinguished by colors, but also by the marks and sizes. |
| (h) When a product permits a user to adjust color and contrast settings, a range of color selections capable of producing a variety of contrast levels shall be provided. | Not applicable | The product does not permit the user to adjust the color and contrast setting. |
| (i) Products shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz. | Not applicable | The product does not have a flicker. |
| (j) (1) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: The position of any operable control shall be determined with respect to a vertical plane, which is 48 inches in length, centered on the operable control, and at the maximum protrusion of the product within the 48 inch length on products which are freestanding, non-portable, and intended to be used in one location and which have operable controls. | Not applicable | Because the product is a desktop model, the position of the machine can be adjusted to accommodate users with varying degrees of mobility. |
| (j)(2) Products which are freestanding, non-portable, and intended to be used in | Not applicable | Because the product is a desktop model, the |

| | | |
|--|----------------|--|
| one location and which have operable controls shall comply with the following: Where any operable control is 10 inches or less behind the reference plane, the height shall be 54 inches maximum and 15 inches minimum above the floor. | | position of the machine can be adjusted to accommodate users with varying degrees of mobility. |
| (j)(3) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Where any operable control is more than 10 inches and not more than 24 inches behind the reference plane, the height shall be 46 inches maximum and 15 inches minimum above the floor. | Not applicable | Because the product is a desktop model, the position of the machine can be adjusted to accommodate users with varying degrees of mobility. |
| (j)(4) Products which are freestanding, non-portable, and intended to be used in one location and which have operable controls shall comply with the following: Operable controls shall not be more than 24 inches behind the reference plane. | Not applicable | Because the product is a desktop model, the position of the machine can be adjusted to accommodate users with varying degrees of mobility. |

Section 1194.31 Functional Performance Criteria - Detail
Voluntary Product Accessibility Template

| Criteria | Supporting Features | Remarks and explanations |
|---|----------------------------|---|
| (a) At least one mode of operation and information retrieval that does not require user vision shall be provided, or support for Assistive Technology used by people who are blind or visually impaired shall be provided. | Supports | All keys on the control panel are tactilely discernible. The Document Feeder guarantees proper placement of documents. |
| (b) At least one mode of operation and information retrieval that does not require visual acuity greater than 20/70 shall be provided in audio and enlarged print output working together or independently, or support for Assistive Technology used by people who are visually impaired shall be provided. | Supports | |
| (c) At least one mode of operation and information retrieval that does not require user hearing shall be provided, or support for Assistive Technology used by people who are deaf or hard of hearing shall be provided. | Not applicable | |
| (d) Where audio information is important for the use of a product, at least one mode of operation and information retrieval shall be provided in an enhanced auditory fashion, or support for assistive hearing devices shall be provided. | Not applicable | There is no audio information. |
| (e) At least one mode of operation and information retrieval that does not require user speech shall be provided, or support for Assistive Technology used by people with disabilities shall be provided. | Not applicable | There is no voice operated function. |
| (f) At least one mode of operation and information retrieval that does not require fine motor control or simultaneous actions and that is operable with limited reach and strength shall be provided. | Supports | |

| Section 1194.41 Information, Documentation and Support | | |
|---|---------------------|--------------------------|
| <i>Criteria</i> | Supporting Features | Remarks and explanations |
| Product support documentation is available in alternate formats upon request. | Supports | |
| Users have access to a description of accessibility features. | Supports | |
| Support services (such as Help Desks) accommodate users with disabilities. | Supports | |
